

EYEBROW POST TREATMENT

- Keep the brow area clean by cleaning with water wipe 2x daily. Hands must be freshly cleaned. (Avoid use of abrasive washcloths or sponges).
- Allow eyebrows to completely air dry before applying ointment. Apply the after-care ointment given (for the number of days recommended by your artist) with freshly washed hands or a Q-Tip.
- DO NOT rub, pick or scratch the treated area. Let any scabbing or dry skin naturally exfoliate off. Picking can cause scarring and pigment loss!
- COMPLETELY avoid direct sun exposure for a minimum of 4 weeks after your procedure. Direct sunlight can cause the pigment to change color while it is healing and can also cause hyper pigmentation and scarring. Tanning beds are not advised due to extreme pigment change.
- Avoid pool, sauna, steam rooms, hot showers and/or hot baths for 3 weeks.
- Avoid sweating for a full 10 days. Any physical effort, gym, hot weather, any other activity that may cause sweating through or on the brows will expel pigment from the dermis producing poor results.
- Avoid sleeping on your face/brows for the first 10 days.
- Keep your bangs and hair pulled back from your face for the first 10 days.
- NO makeup or skincare products to be used on the treated area for two weeks.
- NO facials, chemical treatments and microdermabrasion for 4 weeks.
- NO botox for 4 weeks. We recommend that it is best to wait until after your touch up heals to get Botox, as an educated injector will take your new brows into consideration when choosing where to inject.
- After 10 days, once the area has healed completely, consider using sunblock when going out in the sun to stop the color from fading.
- Eyebrow tinting should not be undertaken for 2 weeks after your procedure.
- Avoid Retin-A, Chemical Peels, and Microderm around the brow area once healed.

If an allergic reaction should occur, please contact your care physician.
